Important Instructions:

1. The test is of **3 hours** duration and Test Booklet contains **180** questions. Each question carries **4** marks. For each correct response, the candidate will get **4** marks. For each incorrect response, **one mark** will be deducted from the total scores. The maximum marks are **720**.

2. Use **Blue / Black Ball point Pen only** for writing particulars on this page/marking responses.

3. Rough work is to be done on the space provided for this purpose in the Test Booklet only.

4. On completion of the test, the candidate must handover the Answer Sheet to the Invigilator before leaving the Room / Hall. **The candidates are allowed to take away this Test Booklet with them.**

5. The CODE for this Booklet is **XX**.

6. The candidates should ensure that the Answer Sheet is not folded. Do not make any stray marks on the Answer Sheet. Do not write your Roll No. anywhere else except in the specified space in the Test Booklet/Answer Sheet.

7. Each candidate must show on demand his/her Admission Card to the Invigilator.

8. No candidate, without special permission of the Superintendent or Invigilator, would leave his/her seat.

9. Use of Electronic/Manual Calculator is prohibited.

10. The candidates are governed by all Rules and Regulations of the examination with regard to their conduct in the Examination Hall. All cases of unfair means will be dealt with as per Rules and Regulations of this examination.

11. No part of the Test Booklet and Answer Sheet shall be detached under any circumstances.

12. The candidates will write the Correct Test Booklet Code as given in the Test Booklet / Answer Sheet in the Attendance Sheet.
1. The bond dissociation energies of \( X_2 \), \( Y_2 \) and \( XY \) are in the ratio of 1 : 0.5 : 1. \( \Delta H \) for the formation of \( XY \) is \(-200 \text{ kJ mol}^{-1} \). The bond dissociation energy of \( X_2 \) will be
   (1) 400 kJ mol\(^{-1}\)  (2) 200 kJ mol\(^{-1}\)  (3) 800 kJ mol\(^{-1}\)  (4) 100 kJ mol\(^{-1}\)

Answer (3)
Sol. The reaction for \( \Delta H^\circ(\text{XY}) \)

\[
\frac{1}{2} X_2(g) + \frac{1}{2} Y_2(g) \rightarrow XY(g)
\]

Bond energies of \( X_2, Y_2 \) and \( XY \) are \( X, \frac{X}{2}, X \) respectively

\[ \therefore \ \Delta H = \left( \frac{X}{2} + \frac{X}{4} \right) - X = -200 \]

On solving, we get

\[ \Rightarrow \ X = 800 \text{ kJ/mole} \]

2. When initial concentration of the reactant is doubled, the half-life period of a zero order reaction
   (1) Remains unchanged
   (2) Is halved
   (3) Is tripled
   (4) Is doubled

Answer (4)
Sol. Half life of zero order

\[ t_{1/2} = \frac{[A_0]}{2K} \]

\( t_{1/2} \) will be doubled on doubling the initial concentration.

3. The correction factor ‘\( a \)’ to the ideal gas equation corresponds to
   (1) Forces of attraction between the gas molecules
   (2) Density of the gas molecules
   (3) Electric field present between the gas molecules
   (4) Volume of the gas molecules

Answer (1)
Sol. In real gas equation,

\[ P + \frac{an^2}{V^2}(V-nb) = nRT \]

van der Waal’s constant, ‘\( a \)’ signifies intermolecular forces of attraction.

4. Which one of the following conditions will favour maximum formation of the product in the reaction,

\[ \text{A}_2(g) + \text{B}_2(g) \rightleftharpoons \text{X}_2(g) \]

\[ \Delta H^\circ = -x \text{ kJ} \]

(1) High temperature and low pressure
(2) Low temperature and high pressure
(3) High temperature and high pressure
(4) Low temperature and low pressure

Answer (2)
Sol. \( \text{A}_2(g) + \text{B}_2(g) \rightleftharpoons \text{X}_2(g); \Delta H^\circ = -x \text{ kJ} \)

On increasing pressure equilibrium shifts in a direction where pressure decreases i.e. forward direction.

On decreasing temperature, equilibrium shifts in exothermic direction i.e., forward direction.

So, high pressure and low temperature favours maximum formation of product.

5. For the redox reaction

\[ \text{MnO}_4^- + \text{C}_2\text{O}_4^{2-} + \text{H}^+ \rightarrow \text{Mn}^{2+} + \text{CO}_2 + \text{H}_2\text{O} \]

The correct coefficients of the reactants for the balanced equation are

\[ \text{MnO}_4^- \quad \text{C}_2\text{O}_4^{2-} \quad \text{H}^+ \]

(1) 5 16 2
(2) 16 5 2
(3) 2 16 5
(4) 2 5 16

Answer (4)
Sol. \( \text{MnO}_4^- + \text{C}_2\text{O}_4^{2-} + \text{H}^+ \rightarrow \text{Mn}^{2+} + \text{CO}_2 + \text{H}_2\text{O} \)

\[ \text{Reduction} \]
\[ \text{Oxidation} \]

n-factor of \( \text{MnO}_4^- \) \( \Rightarrow \) 5
n-factor of \( \text{C}_2\text{O}_4^{2-} \) \( \Rightarrow \) 2

Ratio of n-factors of \( \text{MnO}_4^- \) and \( \text{C}_2\text{O}_4^{2-} \) is 5 : 2
So, molar ratio in balanced reaction is 2 : 5

\[ \therefore \ \text{The balanced equation is} \]

\[ 2\text{MnO}_4^- + 5\text{C}_2\text{O}_4^{2-} + 16\text{H}^+ \rightarrow 2\text{Mn}^{2+} + 10\text{CO}_2 + 8\text{H}_2\text{O} \]
6. In the reaction
\[
\text{OH} + \text{CHCl}_3 + \text{NaOH} \rightarrow \text{O}^+ \text{Na}^-
\]

The electrophile involved is
(1) Dichlorocarbene \(\text{CCl}_2\)
(2) Dichloromethyl cation \(\text{CHCl}_2\)
(3) Dichloromethyl anion \(\text{CHCl}_2^\cdot\)
(4) Formyl cation \(\text{CHO}\)

**Answer (1)**

**Sol.** It is Reimer-Tiemann reaction. The electrophile formed is \(\text{CCl}_2\) (Dichlorocarbene) according to the following reaction
\[
\text{CHCl}_3 + \text{OH}^- \rightleftharpoons \text{CCl}_3 + \text{H}_2\text{O}
\]

\[
\text{CCl}_3 \rightarrow \text{CCl}_2^\cdot + \text{Cl}^-
\]

7. Carboxylic acids have higher boiling points than aldehydes, ketones and even alcohols of comparable molecular mass. It is due to their
(1) Formation of intermolecular H-bonding
(2) Formation of intramolecular H-bonding
(3) More extensive association of carboxylic acid via van der Waals force of attraction
(4) Formation of carboxylate ion

**Answer (1)**

**Sol.** Due to formation of intermolecular H-bonding in carboxylic acid, association occurs. Hence boiling point increases and become more than the boiling point of aldehydes, ketones and alcohols of comparable molecular masses.

8. Compound A, \(\text{C}_8\text{H}_{10}\text{O}\), is found to react with NaOI (produced by reacting Y with NaOH) and yields a yellow precipitate with characteristic smell.

A and Y are respectively
(1) \(\text{CH}_3\)
(2) \(\text{H}_3\text{C}\)
(3) \(\text{CH} - \text{CH}_3\)
(4) \(\text{CH} - \text{CH}_2\text{OH}\)

**Answer (3)**

**Sol.** Option (4) is secondary alcohol which on oxidation gives phenylmethyl ketone (Acetophenone). This on reaction with \(\text{I}_2\) and NaOH form iodoform and sodium benzoate.

\[
2\text{NaOH} + \text{I}_2 \rightarrow \text{NaOI} + \text{NaI} + \text{H}_2\text{O}
\]

9. The correct difference between first and second order reactions is that
(1) The rate of a first-order reaction does depend on reactant concentrations; the rate of a second-order reaction does not depend on reactant concentrations
(2) The rate of a first-order reaction does not depend on reactant concentrations; the rate of a second-order reaction does depend on reactant concentrations
(3) A first-order reaction can catalyzed; a second-order reaction cannot be catalyzed
(4) The half-life of a first-order reaction does not depend on \([\text{A}]_0\); the half-life of a second-order reaction does depend on \([\text{A}]_0\)

**Answer (4)**

**Sol.** For first order reaction, \(t_{1/2} = \frac{0.693}{k}\), which is independent of initial concentration of reactant.
For second order reaction, \( t_{1/2} = \frac{1}{k[A_0]} \), which depends on initial concentration of reactant.

10. Consider the change in oxidation state of Bromine corresponding to different emf values as shown in the diagram below:

\[
\begin{align*}
\text{BrO}_4^- & \xrightarrow{1.82 \text{ V}} \text{BrO}_3^- \xrightarrow{1.5 \text{ V}} \text{HBrO} \\
\text{Br}^{-} & \xleftarrow{1.0652 \text{ V}} \text{Br}_2^{-} \xrightarrow{1.595 \text{ V}} \text{BrO}_4^{-}
\end{align*}
\]

Then the species undergoing disproportionation is

1. HBrO
2. BrO_3^-
3. Br_2
4. BrO_4^-

Answer (1)

Sol. \( HBrO \rightarrow Br_2, E^0_{HBrO/Br_2} = 1.595 \text{ V} \)

\( HBrO \rightarrow BrO_3^-, E^0_{BrO_3^-/HBrO} = 1.5 \text{ V} \)

\( E_{\text{cell}} \) for the disproportionation of HBrO,

\( E_{\text{cell}} = E^0_{HBrO/Br_2} - E^0_{BrO_3^-/HBrO} = 1.595 - 1.5 = 0.095 \text{ V} = + \text{ ve} \)

11. Among CaH_2, BeH_2, BaH_2, the order of ionic character is

1. BaH_2 < BeH_2 < CaH_2
2. BeH_2 < CaH_2 < BaH_2
3. BeH_2 < BaH_2 < CaH_2
4. CaH_2 < BeH_2 < BaH_2

Answer (2)

Sol. For 2nd group hydrides, on moving down the group metallic character of metals increases so ionic character of metal hydride increases.

12. In which case is number of molecules of water maximum?

1. \( 10^{-3} \) mol of water
2. 18 mL of water
3. 0.00224 L of water vapours at 1 atm and 273 K
4. 0.18 g of water

Answer (2)

Sol. (1) Molecules of water = mole \times N_A = 10^{-3} N_A

(2) Mass of water = 18 \times 1 = 18 g

Molecules of water = mole \times N_A = \frac{18 N_A}{18} = N_A

(3) Moles of water = \frac{0.00224}{22.4} = 10^{-4}

Molecules of water = mole \times N_A = \frac{0.18 N_A}{18} = 10^{-2} N_A

13. The difference between amylose and amylopectin is

1. Amylose is made up of glucose and galactose
2. Amylopectin have 1 \( \rightarrow \) 4 \( \alpha \)-linkage and 1 \( \rightarrow \) 6 \( \alpha \)-linkage
3. Amylopectin have 1 \( \rightarrow \) 4 \( \alpha \)-linkage and 1 \( \rightarrow \) 6 \( \beta \)-linkage
4. Amylose have 1 \( \rightarrow \) 4 \( \alpha \)-linkage and 1 \( \rightarrow \) 6 \( \beta \)-linkage

Answer (2)

Sol. Amylose and Amylopectin are polymers of \( \alpha \)-D-glucose, so \( \beta \)-link is not possible. Amylose is linear with 1 \( \rightarrow \) 4 \( \alpha \)-linkage whereas Amylopectin is branched and has both 1 \( \rightarrow \) 4 and 1 \( \rightarrow \) 6 \( \alpha \)-linkages.

14. Nitration of aniline in strong acidic medium also gives m-nitroaniline because

1. In acidic (strong) medium aniline is present as anilinium ion.
2. Inspite of substituents nitro group always goes to only m-position.
3. In absence of substituents nitro group always goes to m-position.
4. In electrophilic substitution reactions amino group is meta directive.

Answer (1)

Sol. (1) Molecules of water = mole \times N_A = 10^{-3} N_A

(2) Mass of water = 18 \times 1 = 18 g

Molecules of water = mole \times N_A = \frac{18 N_A}{18} = N_A

(3) Moles of water = \frac{0.00224}{22.4} = 10^{-4}

Molecules of water = mole \times N_A = \frac{0.18 N_A}{18} = 10^{-2} N_A

(4) Molecules of water = mole \times N_A = \frac{18 N_A}{18} = N_A

Answer (2)

Sol. Amylose and Amylopectin are polymers of \( \alpha \)-D-glucose, so \( \beta \)-link is not possible. Amylose is linear with 1 \( \rightarrow \) 4 \( \alpha \)-linkage whereas Amylopectin is branched and has both 1 \( \rightarrow \) 4 and 1 \( \rightarrow \) 6 \( \alpha \)-linkages.
-NH₂ is m-directing, hence besides para (51%) and ortho (2%), meta product (47%) is also formed in significant yield.

15. Which of the following oxides is most acidic in nature?
   (1) CaO  (2) MgO  (3) BaO  (4) BeO

Answer (4)

Sol. BeO < MgO < CaO < BaO

Basic character increases.
So, the most acidic should be BeO. In fact, BeO is amphoteric oxide while other given oxides are basic.

16. A mixture of 2.3 g formic acid and 4.5 g oxalic acid is treated with conc. H₂SO₄. The evolved gaseous mixture is passed through KOH pellets. Weight (in g) of the remaining product at STP will be
   (1) 4.4  (2) 1.4  (3) 2.8  (4) 3.0

Answer (3)

Sol. HCOOH$\xrightarrow{\text{Conc.} \text{H}_2\text{SO}_4}$ CO(g) + H₂O(l)

COOH$\xrightarrow{\text{Conc.} \text{H}_2\text{SO}_4}$ CO(g) + CO₂(g) + H₂O(l)

Gaseous mixture formed is CO and CO₂ when it is passed through KOH, only CO₂ is absorbed. So the remaining gas is CO.

So, weight of remaining gaseous product CO is

$$\frac{2}{20} \times 28 = 2.8 \text{ g}$$

17. Regarding cross-linked or network polymers, which of the following statements is incorrect?
   (1) They contain strong covalent bonds in their polymer chains.
   (2) They contain covalent bonds between various linear polymer chains.
   (3) Examples are bakelite and melamine.
   (4) They are formed from bi- and tri-functional monomers.

Answer (1)

Sol. Cross linked or network polymers are formed from bi-functional and tri-functional monomers and contain strong covalent bonds between various linear polymer chains, e.g. bakelite, melamine etc. Option (1) is not related to cross-linking.

18. Magnesium reacts with an element (X) to form an ionic compound. If the ground state electronic configuration of (X) is 1s² 2s² 2p³, the simplest formula for this compound is
   (1) Mg₃X₂  (2) Mg₂X₃  (3) Mg₂X  (4) MgX₂

Answer (1)

Sol. Element (X) electronic configuration

1s² 2s² 2p³

So, valency of X will be 3.
Valency of Mg is 2.
Formula of compound formed by Mg and X will be Mg₃X₂.

19. Iron exhibits bcc structure at room temperature. Above 900°C, it transforms to fcc structure. The ratio of density of iron at room temperature to that at 900°C (assuming molar mass and atomic radii of iron remains constant with temperature) is
   (1) \( \frac{1}{2} \)  (2) \( \frac{\sqrt{3}}{\sqrt{2}} \)  (3) \( \frac{3\sqrt{3}}{4\sqrt{2}} \)  (4) \( \frac{4\sqrt{3}}{3\sqrt{2}} \)

Answer (3)

Sol. For BCC lattice : \( Z = 2, a = \frac{4r}{\sqrt{3}} \)

For FCC lattice : \( Z = 4, a = 2\sqrt{2} r \)

\[
\frac{d_{25^\circ C}}{d_{900^\circ C}} = \frac{\frac{ZM}{N_A a^3}}{\frac{ZM}{N_A a^3}} = \frac{2\left(\frac{2\sqrt{2}r}{4r}\right)^3}{\frac{3\sqrt{3}}{4\sqrt{2}}} = \frac{\frac{3\sqrt{3}}{4\sqrt{2}}}{\frac{3\sqrt{3}}{4\sqrt{2}}} = 1
\]
20. Which one is a wrong statement?
   (1) The value of m for d^2 is zero
   (2) Total orbital angular momentum of electron in 's' orbital is equal to zero
   (3) The electronic configuration of N atom is
       1s^2 2s^2 2p^2 3s^2 3p^2
   (4) An orbital is designated by three quantum numbers while an electron in an atom is
designated by four quantum numbers

Answer (3)
Sol. According to Hund’s Rule of maximum multiplicity, the correct electronic configuration of N-atom is
   1s^2 2s^2 2p^3
   OR
   1s^2 2s^2 2p^1 2p^3

. Option (3) violates Hund’s Rule.

21. Consider the following species:
   - CN^+, CN^-, NO and CN

Which one of these will have the highest bond order?
   (1) CN
   (2) NO
   (3) CN^+
   (4) CN^-

Answer (4)
Sol. NO : (σ1s)^2, (σ^1s)^2, (σ2s)^2,(σ2s)^2, (σ2p_x)^2, (π2p_y)^2, (π^2p_y)^1 = (π 2p_y)^9
BO = \frac{10 - 5}{2} = 2.5
CN^- : (σ1s)^2, (σ^1s)^2, (σ2s)^2,(σ2s)^2, (π2p_x)^2
BO = \frac{10 - 4}{2} = 3
CN : (σ1s)^2, (σ^1s)^2, (σ2s)^2,(σ2s)^2, (π2p_x)^2
BO = \frac{9 - 4}{2} = 2.5
CN^+ : (σ1s)^2, (σ^1s)^2, (σ2s)^2,(σ2s)^2, (π2p_x)^2
BO = \frac{8 - 4}{2} = 2

22. Following solutions were prepared by mixing different volumes of NaOH and HCl of different concentrations:
   a. 60 mL M \frac{10}{10} HCl + 40 mL M \frac{10}{10} NaOH
   b. 55 mL M \frac{10}{10} HCl + 45 mL M \frac{10}{10} NaOH
   c. 75 mL M \frac{5}{5} HCl + 25 mL M \frac{5}{5} NaOH
   d. 100 mL M \frac{10}{10} HCl + 100 mL M \frac{10}{10} NaOH

pH of which one of them will be equal to 1?
   (1) c
   (2) b
   (3) d
   (4) a

Answer (1)
Sol. • Meq of HCl = 75 \times \frac{1}{5} \times 1 = 15
   • Meq of NaOH = 25 \times \frac{1}{5} \times 1 = 5
   • Meq of HCl in resulting solution = 10
   • Molarity of [H^+] in resulting mixture = \frac{10}{100} = 1
   • pH = –log[H^+] = –log\left[\frac{1}{10}\right] = 1.0

23. The solubility of BaSO_4 in water is 2.42 × 10^{-3} gL^{-1} at 298 K. The value of its solubility product (K_{sp}) will be
   (Given molar mass of BaSO_4 = 233 g mol^{-1})
   (1) 1.08 \times 10^{-8} mol^2L^{-2}
   (2) 1.08 \times 10^{-10} mol^2L^{-2}
   (3) 1.08 \times 10^{-14} mol^2L^{-2}
   (4) 1.08 \times 10^{-12} mol^2L^{-2}

Answer (2)
Sol. Solubility of BaSO_4, s = \frac{2.42 \times 10^{-3}}{233} (mol L^{-1})
   = 1.04 \times 10^{-5} (mol L^{-1})
   \frac{BaSO_4(s)}{Ba^{2+}(aq) + SO_4^{2-}(aq)}
   K_{sp} = [Ba^{2+}] [SO_4^{2-}] = s^2
   = (1.04 \times 10^{-5})^2
   = 1.08 \times 10^{-10} mol^2 L^{-2}
24. On which of the following properties does the coagulating power of an ion depend?
   (1) The sign of charge on the ion alone
   (2) The magnitude of the charge on the ion alone
   (3) Both magnitude and sign of the charge on the ion
   (4) Size of the ion alone

Answer (3)

Sol.
- Coagulation of colloidal solution by using an electrolyte depends on the charge present (positive or negative) on colloidal particles as well as on its size.
- Coagulating power of an electrolyte depends on the magnitude of charge present on effective ion of electrolyte.

25. Given van der Waals constant for \( \text{NH}_3 \), \( \text{H}_2 \), \( \text{O}_2 \) and \( \text{CO}_2 \) are respectively 4.17, 0.244, 1.36 and 3.59, which one of the following gases is most easily liquefied?
   (1) \( \text{CO}_2 \)
   (2) \( \text{NH}_3 \)
   (3) \( \text{O}_2 \)
   (4) \( \text{H}_2 \)

Answer (2)

Sol.
- Van der Waal constant ‘\( a \)’, signifies intermolecular forces of attraction.
- Higher is the value of ‘\( a \)’, easier will be the liquefaction of gas.

26. The geometry and magnetic behaviour of the complex \([\text{Ni(CO)}_4]\) are
   (1) Tetrahedral geometry and paramagnetic
   (2) Square planar geometry and diamagnetic
   (3) Square planar geometry and paramagnetic
   (4) Tetrahedral geometry and diamagnetic

Answer (4)

Sol.
\( \text{Ni}(28) : [\text{Ar}] 3\text{d}^8 4\text{s}^2 \)
\text{. CO is a strong field ligand}
\text{Configuration would be :}

\[
\begin{array}{c}
\text{Ni} \text{CO CO CO CO} \\
\text{sp}^3\text{-hybridisation}
\end{array}
\]

For, four ‘\( \text{CO} \)’-ligands hybridisation would be \( \text{sp}^3 \) and thus the complex would be diamagnetic and of tetrahedral geometry.

27. Iron carbonyl, \( \text{Fe(CO)}_5 \) is
   (1) Dinuclear
   (2) Tetranuclear
   (3) Trinuclear
   (4) Mononuclear

Answer (4)

Sol.
- Based on the number of metal atoms present in a complex, they are classified into mononuclear, dinuclear, trinuclear and so on.
- \( \text{Fe(CO)}_5 \) : mononuclear
- \( \text{Co}_2(\text{CO})_8 \) : dinuclear
- \( \text{Fe}_3(\text{CO})_{12} \) : trinuclear

Hence, option (2) should be the right answer.

28. Match the metal ions given in Column I with the spin magnetic moments of the ions given in Column II and assign the correct code :

\[
\begin{array}{cccc}
\text{Column I} & \text{Column II} \\
\text{a. } \text{Co}^{3+} & \text{i. } \sqrt{8} \text{ BM} \\
\text{b. } \text{Cr}^{3+} & \text{ii. } \sqrt{35} \text{ BM} \\
\text{c. } \text{Fe}^{3+} & \text{iii. } \sqrt{3} \text{ BM} \\
\text{d. } \text{Ni}^{2+} & \text{iv. } \sqrt{24} \text{ BM} \\
\text{v. } \sqrt{15} \text{ BM} \\
\end{array}
\]

\[
\begin{array}{cccc}
\text{a} & \text{b} & \text{c} & \text{d} \\
\text{(1) } & \text{(2) } & \text{(3) } & \text{(4) } \\
\text{iii} & \text{v} & \text{i} & \text{ii} \\
\text{v} & \text{v} & \text{ii} & \text{i} \\
\text{iv} & \text{i} & \text{ii} & \text{iii} \\
\text{i} & \text{ii} & \text{iii} & \text{iv} \\
\end{array}
\]

Answer (2)

Sol.
\( \text{Co}^{3+} = [\text{Ar}] 3\text{d}^6, \text{Unpaired } \text{e}^{-}(n) = 4 \)

Spin magnetic moment = \( \sqrt{4(4+2)} = \sqrt{24} \text{ BM} \)

\( \text{Cr}^{3+} = [\text{Ar}] 3\text{d}^3, \text{Unpaired } \text{e}^{-}(n) = 3 \)

Spin magnetic moment = \( \sqrt{3(3+2)} = \sqrt{15} \text{ BM} \)

\( \text{Fe}^{3+} = [\text{Ar}] 3\text{d}^5, \text{Unpaired } \text{e}^{-}(n) = 5 \)

Spin magnetic moment = \( \sqrt{5(5+2)} = \sqrt{35} \text{ BM} \)
29. The type of isomerism shown by the complex [CoCl₂(en)₂] is
(1) Linkage isomerism
(2) Geometrical isomerism
(3) Ionization isomerism
(4) Coordination isomerism

Answer (2)
Sol. In [CoCl₂(en)₂], Coordination number of Co is 6 and this compound has octahedral geometry.

- As per given option, type of isomerism is geometrical isomerism.

30. Which one of the following ions exhibits d-d transition and paramagnetism as well?
(1) MnO₄²⁻
(2) CrO₄²⁻
(3) MnO₄⁻
(4) Cr₂O₇²⁻

Answer (1)
Sol. Cr₂O₇²⁻ \rightarrow Cr^{6+} = [Ar]

Unpaired electron (n) = 0; Diamagnetic

Cr₂O₇²⁻ \rightarrow Cr^{6+} = [Ar]

Unpaired electron (n) = 0; Diamagnetic

MnO₄⁻ = Mn^{6+} = [Ar] 3d¹

Unpaired electron (n) = 1; Paramagnetic

MnO₄ = Mn^{7+} = [Ar]

Unpaired electron (n) = 0; Diamagnetic

31. The compound A on treatment with Na gives B, and with PCl₅ gives C. B and C react together to give diethyl ether. A, B and C are in the order
(1) C₂H₅OH, C₂H₅ONa, C₂H₅Cl
(2) C₂H₅OH, C₂H₆, C₂H₅Cl
(3) C₂H₅Cl, C₂H₆, C₂H₅OH
(4) C₂H₅OH, C₂H₅Cl, C₂H₅ONa

Answer (1)
34. Which oxide of nitrogen is not a common pollutant introduced into the atmosphere both due to natural and human activity?

(1) NO  (2) N\textsubscript{2}O\textsubscript{5}  (3) N\textsubscript{2}O  (4) NO\textsubscript{2}

Answer (2)

Sol. Fact

35. Identify the major products P, Q and R in the following sequence of reactions:

\[
\text{C}_6\text{H}_6 + \text{CH}_3\text{CH}_2\text{CH}_2\text{Cl} \xrightarrow{\text{Anhydrous AlCl}_3} P \xrightarrow{(i) O_2} Q + R
\]

(A)

\[
\begin{align*}
(1) & \quad \text{CH} & \text{(CH\textsubscript{3})}_3 \quad \text{OH} & \text{,} & \text{CH}_3 & \text{CO} & \text{CH}_3 \\
(2) & \quad \text{CH}_3\text{CH} & \text{CH} & \text{CHO} & \text{,} & \text{CH}_3\text{CH}_2 & \text{OH} \\
(3) & \quad \text{CH} & \text{(CH\textsubscript{3})}_2 \quad \text{OH} & \text{,} & \text{CH}_3\text{CH(\textsubscript{CH\textsubscript{3}})}\text{OH} & \text{CH}_3 \\
(4) & \quad \text{CH}_3\text{CH}_2 & \text{CH} & \text{CHO} & \text{,} & \text{COOH}
\end{align*}
\]

Answer (1)

36. Which of the following compounds can form a zwitterion?

(1) Glycine  (2) Aniline  (3) Benzoic acid  (4) Acetanilide

Answer (1)

Sol. \[
\text{H}_2\text{N} - \text{CH}_2 - \text{COOH} \xrightarrow{\text{pK}_a = 9.60} \text{H}_2\text{N} - \text{CH}_2 - \text{COO}^- \\
\text{H}^+ + \text{H}_2\text{O} \xrightarrow{\text{pK}_a = 2.34} \text{H}_2\text{N} - \text{CH}_2 - \text{COO}^-
\]

37. Which of the following molecules represents the order of hybridisation sp\textsuperscript{2}, sp\textsuperscript{3}, sp, sp from left to right atoms?

(1) CH\textsubscript{3} – CH = CH – CH\textsubscript{3}  (2) HC \equiv C – C \equiv CH  (3) CH\textsubscript{2} = CH – CH = CH\textsubscript{2}  (4) CH\textsubscript{2} = CH – C \equiv CH

Answer (4)

Sol. CH\textsubscript{2} = CH – C \equiv CH

Number of orbital require in hybridization = Number of \(\sigma\)-bonds around each carbon atom.

38. Which of the following carboxations is expected to be most stable?

\[
\begin{align*}
(1) & \quad \text{CH}_3\text{CH}_2\text{CH} & \text{Cl} & \xrightarrow{1,2-H} \text{CH}_3\text{CH}_2\text{CH}_2\text{Cl} \xrightarrow{\text{AlCl}_3} \text{CH}_3 - \text{CH} = \text{CH} - \text{Cl} \\
(2) & \quad \text{Y} & \text{NO}_2 & \text{(Incipient carbocation)} \\
(3) & \quad \text{H} & \text{NO}_2 & \text{(2)} \\
(4) & \quad \text{Y} & \text{NO}_2
\end{align*}
\]
Answer (3)

Sol. –NO₂ group exhibit –I effect and it decreases with increase in distance. In option (3) positive charge present on C-atom at maximum distance so –I effect reaching to it is minimum and stability is maximum.

39. Which of the following is correct with respect to –I effect of the substituents? (R = alkyl)

(1) –NR₂ > –OR > –F
(2) –NH₂ < –OR < –F
(3) –NH₂ > –OR > –F
(4) –NR₂ < –OR < –F

Answer (2*)

Sol. –I effect increases on increasing electronegativity of atom. So, correct order of –I effect is –NH₂ < –OR < –F.

*Most appropriate Answer is option (2), however option (4) may also be correct answer.

40. Which of the following statements is not true for halogens?

(1) Chlorine has the highest electron-gain enthalpy
(2) All form monobasic oxyacids
(3) All but fluorine show positive oxidation states
(4) All are oxidizing agents

Answer (3)

Sol. Due to high electronegativity and small size, F forms only one oxoacid, HOF known as Fluoric (I) acid. Oxidation number of F is +1 in HOF.

41. Considering Ellingham diagram, which of the following metals can be used to reduce alumina?

(1) Cu (2) Fe
(3) Mg (4) Zn

Answer (3)

Sol. The metal which is more reactive than 'Al' can reduce alumina i.e. 'Mg' should be the correct option.

42. The correct order of atomic radii in group 13 elements is

(1) B < Ga < Al < In < Tl
(2) B < Al < In < Ga < Tl
(3) B < Ga < Al < Tl < In
(4) B < Al < Ga < In < Tl

Answer (1)

Sol.

<table>
<thead>
<tr>
<th>Elements</th>
<th>B</th>
<th>Ga</th>
<th>Al</th>
<th>In</th>
<th>Tl</th>
</tr>
</thead>
<tbody>
<tr>
<td>Atomic radii (pm)</td>
<td>85</td>
<td>135</td>
<td>143</td>
<td>167</td>
<td>170</td>
</tr>
</tbody>
</table>

43. In the structure of ClF₃, the number of lone pairs of electrons on central atom ‘Cl’ is

(1) Three (2) One
(3) Four (4) Two

Answer (4)

Sol. The structure of ClF₃ is

The number of lone pair of electrons on central Cl is 2.

44. The correct order of N-compounds in its decreasing order of oxidation states is

(1) NH₄Cl, N₂, NO, HNO₃
(2) HNO₃, NO, N₂, NH₄Cl
(3) HNO₃, NH₄Cl, NO, N₂
(4) HNO₃, NO, NH₄Cl, N₂

Answer (2)

Sol. HNO₃, NO, N₂, NH₄Cl

45. Which one of the following elements is unable to form MF₆³⁻ ion?

(1) In (2) Ga
(3) B (4) Al

Answer (3)

Sol. ∵ 'B' has no vacant d-orbitals in its valence shell, so it can't extend its covalency beyond 4, i.e. 'B' cannot form the ion like MF₆³⁻ i.e. BF₆³⁻.

Hence, the correct option is (4).
46. Which of the following options correctly represents the lung conditions in asthma and emphysema, respectively?

(1) Decreased respiratory surface; Inflammation of bronchioles
(2) Inflammation of bronchioles; Decreased respiratory surface
(3) Increased respiratory surface; Inflammation of bronchioles
(4) Increased number of bronchioles; Increased respiratory surface

Answer (2)

Sol. Asthma is a difficulty in breathing causing wheezing due to inflammation of bronchi and bronchioles. Emphysema is a chronic disorder in which alveolar walls are damaged due to which respiratory surface is decreased.

47. Match the items given in Column I with those in Column II and select the correct option given below:

<table>
<thead>
<tr>
<th>Column I</th>
<th>Column II</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Tricuspid valve</td>
<td>i. Between left atrium and left ventricle</td>
</tr>
<tr>
<td>b. Bicuspid valve</td>
<td>ii. Between right ventricle and pulmonary artery</td>
</tr>
<tr>
<td>c. Semilunar valve</td>
<td>iii. Between right atrium and right ventricle</td>
</tr>
</tbody>
</table>

(1) ii i iii
(2) iii i ii
(3) i ii iii
(4) i iii ii

Answer (2)

Sol. Tricuspid valves are AV valve present between right atrium and right ventricle. Bicuspid valves are AV valve present between left atrium and left ventricle. Semilunar valves are present at the openings of aortic and pulmonary aorta.

48. Match the items given in Column I with those in Column II and select the correct option given below:

<table>
<thead>
<tr>
<th>Column I</th>
<th>Column II</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Tidal volume</td>
<td>i. 2500 – 3000 mL</td>
</tr>
<tr>
<td>b. Inspiratory Reserve volume</td>
<td>ii. 1100 – 1200 mL</td>
</tr>
</tbody>
</table>

c. Expiratory Reserve volume iii. 500 – 550 mL

d. Residual volume iv. 1000 – 1100 mL

(1) iv iii ii i
(2) iii ii i iv
(3) i iv ii iii
(4) iii i iv ii

Answer (4)

Sol. Tidal volume is volume of air inspired or expired during normal respiration. It is approximately 500 mL. Inspiratory reserve volume is additional volume of air a person can inspire by a forceful inspiration. It is around 2500 – 3000 mL. Expiratory reserve volume is additional volume of air a person can be expired by a forceful expiration. This averages 1000 – 1100 mL.

Residual volume is volume of air remaining in lungs even after forceful expiration. This averages 1100 – 1200 mL.

49. The transparent lens in the human eye is held in its place by

(1) smooth muscles attached to the ciliary body
(2) ligaments attached to the ciliary body
(3) smooth muscles attached to the iris
(4) ligaments attached to the iris

Answer (2)

Sol. Lens in the human eye is held in its place by suspensory ligaments attached to the ciliary body.

50. Which of the following is an amino acid derived hormone?

(1) Estriol
(2) Epinephrine
(3) Estradiol
(4) Ecdysone

Answer (2)

Sol. Epinephrine is derived from tyrosine amino acid by the removal of carboxyl group. It is a catecholamine.
51. Which of the following structures or regions is incorrectly paired with its functions?

(1) Corpus callosum : band of fibers connecting left and right cerebral hemispheres.

(2) Medulla oblongata : controls respiration and cardiovascular reflexes.

(3) Hypothalamus : production of releasing hormones and regulation of temperature, hunger and thirst.

(4) Limbic system : consists of fibre tracts that interconnect different regions of brain; controls movement.

Answer (4)

Sol. Limbic system is emotional brain. It controls all emotions in our body but not movements.

52. Which of the following hormones can play a significant role in osteoporosis?

(1) Parathyroid hormone and Prolactin

(2) Aldosterone and Prolactin

(3) Estrogen and Parathyroid hormone

(4) Progesterone and Aldosterone

Answer (3)

Sol. Estrogen promotes the activity of osteoblast and inhibits osteoclast. In an ageing female osteoporosis occurs due to deficiency of estrogen. Parathormone promotes mobilisation of calcium from bone into blood. Excessive activity of parathormone causes demineralisation leading to osteoporosis.

53. AGGTATCGCAT is a sequence from the coding strand of a gene. What will be the corresponding sequence of the transcribed mRNA?

(1) UCCAUAGCGUA

(2) AGGUAUCGCAU

(3) ACCUAUGCGAU

(4) UGGTUTCGCAT

Answer (2)

Sol. Coding strand and mRNA has same nucleotide sequence except, ‘T’ – Thymine is replaced by ‘U’–Uracil in mRNA.

54. Match the items given in Column I with those in Column II and select the correct option given below:

<table>
<thead>
<tr>
<th>Column I</th>
<th>Column II</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Proliferative Phase</td>
<td>i. Breakdown of endometrial lining</td>
</tr>
<tr>
<td>b. Secretory Phase</td>
<td>ii. Follicular Phase</td>
</tr>
<tr>
<td>c. Menstruation</td>
<td>iii. Luteal Phase</td>
</tr>
<tr>
<td>a b c</td>
<td>i ii</td>
</tr>
<tr>
<td>(1) iii i ii</td>
<td></td>
</tr>
<tr>
<td>(2) iii ii i</td>
<td></td>
</tr>
<tr>
<td>(3) ii iii i</td>
<td></td>
</tr>
<tr>
<td>(4) i iii ii</td>
<td></td>
</tr>
</tbody>
</table>

Answer (3)

Sol. During proliferative phase, the follicles start developing, hence, called follicular phase. Secretory phase is also called as luteal phase mainly controlled by progesterone secreted by corpus luteum. Estrogen further thickens the endometrium maintained by progesterone. Menstruation occurs due to decline in progesterone level and involves breakdown of overgrown endometrial lining.

55. All of the following are part of an operon except

(1) a promoter

(2) an operator

(3) an enhancer

(4) structural genes

Answer (3)

Sol. • Enhancer sequences are present in eukaryotes.

• Operon concept is for prokaryotes.

56. According to Hugo de Vries, the mechanism of evolution is

(1) Minor mutations

(2) Multiple step mutations

(3) Phenotypic variations

(4) Saltation

Answer (4)

Sol. As per mutation theory given by Hugo de Vries, the evolution is a discontinuous phenomenon or saltatory phenomenon/saltation.
57. A woman has an X-linked condition on one of her X chromosomes. This chromosome can be inherited by
   (1) Both sons and daughters
   (2) Only daughters
   (3) Only grandchildren
   (4) Only sons
Answer (1)
Sol. • Woman is a carrier
   • Both son & daughter inherit X-chromosome
   • Although only son be the diseased
58. In which disease does mosquito transmitted pathogen cause chronic inflammation of lymphatic vessels?
   (1) Amoebiasis
   (2) Elephantiasis
   (3) Ringworm disease
   (4) Ascariasis
Answer (2)
Sol. Elephantiasis is caused by roundworm, *Wuchereria bancrofti* and it is transmitted by Culex mosquito.
59. Among the following sets of examples for divergent evolution, select the incorrect option :
   (1) Eye of octopus, bat and man
   (2) Forelimbs of man, bat and cheetah
   (3) Brain of bat, man and cheetah
   (4) Heart of bat, man and cheetah
Answer (1)
Sol. Divergent evolution occurs in the same structure, example - forelimbs, heart, brain of vertebrates which have developed along different directions due to adaptation to different needs whereas eye of octopus, bat and man are examples of analogous organs showing convergent evolution.
60. Conversion of milk to curd improves its nutritional value by increasing the amount of
   (1) Vitamin E  (2) Vitamin D
   (3) Vitamin B<sub>12</sub>  (4) Vitamin A
Answer (3)
Sol. • Curd is more nourishing than milk.
   • It has enriched presence of vitamins specially Vit-B<sub>12</sub>.
61. Which of the following is not an autoimmune disease?
   (1) Vitiligo
   (2) Psoriasis
   (3) Alzheimer's disease
   (4) Rheumatoid arthritis
Answer (3)
Sol. Rheumatoid arthritis is an autoimmune disorder in which antibodies are produced against the synovial membrane and cartilage. Vitiligo causes white patches on skin also characterised as autoimmune disorder. Psoriasis is a skin disease that causes itchy or sore patches of thick red skin and is also autoimmune whereas Alzheimer's disease is due to deficiency of neurotransmitter acetylcholine.
62. The similarity of bone structure in the forelimbs of many vertebrates is an example of
   (1) Adaptive radiation
   (2) Homology
   (3) Convergent evolution
   (4) Analogy
Answer (2)
Sol. In different vertebrates, bones of forelimbs are similar but their forelimbs are adapted in different way as per their adaptation, hence example of homology.
63. Which of the following characteristics represent ‘Inheritance of blood groups’ in humans?
   a. Dominance
   b. Co-dominance
   c. Multiple allele
   d. Incomplete dominance
   e. Polygenic inheritance
   (1) a, c and e
   (2) b, c and e
   (3) b, d and e
   (4) a, b and c
Answer (4)
Sol. • *I<sup>A</sup>O, I<sup>B</sup>O* - Dominant-recessive relationship
   • *I<sup>A</sup>B* - Codominance
   • *I<sup>A</sup>, I<sup>B</sup> & I<sup>O</sup>* - 3-different allelic forms of a gene (multiple allelism)
64. Match the items given in Column I with those in Column II and select the correct option given below:

<table>
<thead>
<tr>
<th>Column-I</th>
<th>Column-II</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Eutrophication</td>
<td>i. UV-B radiation</td>
</tr>
<tr>
<td>b. Sanitary landfill</td>
<td>ii. Deforestation</td>
</tr>
<tr>
<td>c. Snow blindness</td>
<td>iii. Nutrient enrichment</td>
</tr>
<tr>
<td>d. Jhum cultivation</td>
<td>iv. Waste disposal</td>
</tr>
</tbody>
</table>

a b c d
1. i ii iv iii
2. ii i iii iv
3. iii iv i ii
4. i iii iv ii

Answer (3)
Sol. a. Eutrophication iii. Nutrient enrichment
b. Sanitary landfill iv. Waste disposal
c. Snow blindness i. UV-B radiation
d. Jhum cultivation ii. Deforestation

65. All of the following are included in ‘ex-situ conservation’ except

1. Seed banks
2. Wildlife safari parks
3. Botanical gardens
4. Sacred groves

Answer (4)
Represent pristine forest patch as protected by Tribal groups.

66. Which one of the following population interactions is widely used in medical science for the production of antibiotics?

1. Amensalism
2. Commensalism
3. Parasitism
4. Mutualism

Answer (1)
Sol. Amensalism/Antibiosis (0, –)
- Antibiotics are chemicals secreted by one microbial group (eg: *Penicillium*) which harm other microbes (eg: *Staphylococcus*)
- It has no effect on *Penicillium* or the organism which produces it.

67. In a growing population of a country,

1. pre-reproductive individuals are less than the reproductive individuals.
2. pre-reproductive individuals are more than the reproductive individuals.
3. reproductive and pre-reproductive individuals are equal in number.
4. reproductive individuals are less than the post-reproductive individuals.

Answer (2)
Sol. Whenever the pre-reproductive individuals or the younger population size is larger than the reproductive group, the population will be an increasing population.

68. Which part of poppy plant is used to obtain the drug “Smack”?

1. Leaves
2. Flowers
3. Roots
4. Latex

Answer (4)
Sol. ‘Smack’ also called as brown sugar/Heroin is formed by acetylation of morphine. It is obtained from the latex of unripe capsule of Poppy plant.

69. Hormones secreted by the placenta to maintain pregnancy are

1. hCG, progestogens, estrogens, glucocorticoids
2. hCG, hPL, progestogens, prolactin
3. hCG, hPL, progestogens, estrogens
4. hCG, hPL, estrogens, relaxin, oxytocin

Answer (3)
Sol. Placenta releases human chorionic gonadotrophic hormone (hCG) which stimulates the Corpus luteum during pregnancy to release estrogen and progesterone and also rescues corpus luteum from regression. Human placental lactogen (hPL) is involved in growth of body of mother and breast. Progesterone maintains pregnancy, keeps the uterus silent by increasing uterine threshold to contractile stimuli.

70. The amnion of mammalian embryo is derived from

1. ectoderm and endoderm
2. ectoderm and mesoderm
3. mesoderm and trophoblast
4. endoderm and mesoderm

Answer (2)
Sol. The extraembryonic or foetal membranes are amnion, chorion, allantois and Yolk sac.

Amnion is formed from mesoderm on outer side and ectoderm on inner side.

Chorion is formed from trophoectoderm and mesoderm whereas allantois and Yolk sac membrane have mesoderm on outerside and endoderm in inner side.

71. The contraceptive ‘SAHELI’

(1) is a post-coital contraceptive.

(2) blocks estrogen receptors in the uterus, preventing eggs from getting implanted.

(3) is an IUD.

(4) increases the concentration of estrogen and prevents ovulation in females.

Answer (2)

Sol. Saheli is the first non-steroidal, once a week pill. It contains centchroman and its functioning is based upon selective Estrogen Receptor modulation.

72. The difference between spermiogenesis and spermiation is

(1) In spermiogenesis spermatozoa are formed, while in spermiation spermatozoa are released from sertoli cells into the cavity of seminiferous tubules.

(2) In spermiogenesis spermatids are formed, while in spermiation spermatozoa are formed.

(3) In spermiogenesis spermatozoa from sertoli cells are released into the cavity of seminiferous tubules, while in spermiation spermatozoa are formed.

(4) In spermiogenesis spermatozoa are formed, while in spermiation spermatids are formed.

Answer (1)

Sol. Spermiogenesis is transformation of spermatids into spermatozoa whereas spermiation is the release of the sperms from sertoli cells into the lumen of seminiferous tubule.

73. Match the items given in Column I with those in Column II and select the correct option given below:

<table>
<thead>
<tr>
<th>Column I</th>
<th>Column II</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Glycosuria</td>
<td>i. Accumulation of uric acid in joints</td>
</tr>
<tr>
<td>b. Gout</td>
<td>ii. Mass of crystallised salts within the kidney</td>
</tr>
<tr>
<td>c. Renal calculi</td>
<td>iii. Inflammation in glomeruli</td>
</tr>
<tr>
<td>d. Glomerular nephritis</td>
<td>iv. Presence of glucose in urine</td>
</tr>
</tbody>
</table>

Answer (2)

Sol. Glycosuria denotes presence of glucose in the urine. This is observed when blood glucose level rises above 180 mg/100 ml of blood, this is called renal threshold value for glucose. Gout is due to deposition of uric acid crystals in the joint. Renal calculi are precipitates of calcium phosphate produced in the pelvis of the kidney. Glomerular nephritis is the inflammatory condition of glomerulus characterised by proteininuria and haematuria.

74. Match the items given in Column I with those in Column II and select the correct option given below:

<table>
<thead>
<tr>
<th>Column I (Function)</th>
<th>Column II (Part of Excretory system)</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Ultrafiltration</td>
<td>i. Henle’s loop</td>
</tr>
<tr>
<td>b. Concentration of urine</td>
<td>ii. Ureter</td>
</tr>
<tr>
<td>c. Transport of urine</td>
<td>iii. Urinary bladder</td>
</tr>
<tr>
<td>d. Storage of urine</td>
<td>iv. Malpighian corpuscle</td>
</tr>
<tr>
<td></td>
<td>v. Proximal convoluted tubule</td>
</tr>
</tbody>
</table>

Answer (4)
Ultrafiltration refers to filtration of very fine particles having molecular weight less than 68,000 daltons through malpighian corpuscle.

Concentration of urine refers to water absorption from glomerular filtrate as a result of hyperosmolarity in the medulla created by counter-current mechanism in Henle's loop.

Urinary bladder is concerned with storage of urine.

75. Which of the following gastric cells indirectly help in erythropoiesis?
(1) Parietal cells (2) Chief cells (3) Goblet cells (4) Mucous cells

Answer (1)

Sol. Parietal or oxyntic cell is a source of HCl and intrinsic factor. HCl converts iron present in diet from ferric to ferrous form so that it can be absorbed easily and used during erythropoiesis.

Intrinsic factor is essential for the absorption of vitamin B₁₂ and its deficiency causes pernicious anaemia.

76. Match the items given in Column I with those in Column II and select the correct option given below:

<table>
<thead>
<tr>
<th>Column I</th>
<th>Column II</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Fibrinogen</td>
<td>(i) Osmotic balance</td>
</tr>
<tr>
<td>b. Globulin</td>
<td>(ii) Blood clotting</td>
</tr>
<tr>
<td>c. Albumin</td>
<td>(iii) Defence mechanism</td>
</tr>
</tbody>
</table>

(1) (iii) (iii) (i) (2) (iii) (ii) (i) (3) (i) (iii) (ii) (4) (i) (ii) (iii)

Answer (1)

Sol. Fibrinogen forms fibrin strands during coagulation. These strands forms a network and the meshes of which are occupied by blood cells, this structure finally forms a clot.

Antibodies are derived from γ-Globulin fraction of plasma proteins which means globulins are involved in defence mechanisms.

Albumin is a plasma protein mainly responsible for BCOP.

77. Which of the following is an occupational respiratory disorder?
(1) Emphysema (2) Anthracis (3) Botulism (4) Silicosis

Answer (4)

Sol. Silicosis is due to excess inhalation of silica dust in the workers involved grinding or stone breaking industries.

Long exposure can give rise to inflammation leading to fibrosis and thus causing serious lung damage.

Anthrax is a serious infectious disease caused by *Bacillus anthracis*. It commonly affects domestic and wild animals. Emphysema is a chronic disorder in which alveolar walls are damaged due to which respiratory surface is decreased.

Botulism is a form of food poisoning caused by *Clostridium botulinum*.

78. Calcium is important in skeletal muscle contraction because it
(1) Prevents the formation of bonds between the myosin cross bridges and the actin filament.
(2) Binds to troponin to remove the masking of active sites on actin for myosin.
(3) Detaches the myosin head from the actin filament.
(4) Activates the myosin ATPase by binding to it.

Answer (2)

Sol.
- Signal for contraction increase Ca²⁺ level many folds in the sarcoplasm.
- Ca²⁺ now binds with sub-unit of troponin (troponin "C") which is masking the active site on actin filament and displaces the sub-unit of troponin.
- Once the active site is exposed, head of the myosin attaches and initiate contraction by sliding the actin over myosin.

79. Which of the following events does not occur in rough endoplasmic reticulum?
(1) Phospholipid synthesis
(2) Protein folding
(3) Cleavage of signal peptide
(4) Protein glycosylation

Answer (1)
Sol. Phospholipid synthesis does not take place in RER. Smooth endoplasmic reticulum are involved in lipid synthesis.

80. Many ribosomes may associate with a single mRNA to form multiple copies of a polypeptide simultaneously. Such strings of ribosomes are termed as
(1) Nucleosome (2) Polysome
(3) Plastidome (4) Polyhedral bodies
Answer (2)
Sol. The phenomenon of association of many ribosomes with single m-RNA leads to formation of polyribosomes or polysomes or ergasomes.

81. Nissl bodies are mainly composed of
(1) Free ribosomes and RER
(2) Proteins and lipids
(3) Nucleic acids and SER
(4) DNA and RNA
Answer (1)
Sol. Nissl granules are present in the cyton and even extend into the dendrite but absent in axon and rest of the neuron.
Nissl granules are in fact composed of free ribosomes and RER. They are responsible for protein synthesis.

82. Which of these statements is incorrect?
(1) Oxidative phosphorylation takes place in outer mitochondrial membrane
(2) Enzymes of TCA cycle are present in mitochondrial matrix
(3) Glycolysis operates as long as it is supplied with NAD that can pick up hydrogen atoms
(4) Glycolysis occurs in cytosol
Answer (1)
Sol. Oxidative phosphorylation takes place in inner mitochondrial membrane.

83. Select the incorrect match:
(1) Polytene chromosomes – Oocytes of amphibians
(2) Lampbrush chromosomes – Diploctene bivalents chromosomes
(3) Submetacentric chromosomes – L-shaped chromosomes
(4) Allosomes – Sex chromosomes
Answer (1)
Sol. Polytene chromosomes are found in salivary glands of insects of order Diptera.

84. Which of the following terms describe human dentition?
(1) Pleurodont, Diphyodont, Heterodont
(2) Thecodont, Diphyodont, Homodont
(3) Pleurodont, Monophyodont, Homodont
(4) Thecodont, Diphyodont, Heterodont
Answer (4)
Sol. In humans, dentition is
- Thecodont : Teeth are present in the sockets of the jaw bone called alveoli.
- Diphyodont : Teeth erupts twice, temporary milk or deciduous teeth are replaced by a set of permanent or adult teeth.
- Heterodont dentition : Dentition consists of different types of teeth namely incisors, canine, premolars and molars.

85. Which one of these animals is not a homeotherm?
(1) Psittacula
(2) Macropus
(3) Camelus
(4) Chelone
Answer (4)
Sol. Homeotherm are animals that maintain constant body temperature, irrespective of surrounding temperature.
Birds and mammals are homeotherm.
Chelone (Turtle) belongs to class reptilia which is Poikilotherm or cold blood.

86. Which of the following features is used to identify a male cockroach from a female cockroach?
(1) Presence of anal cerci
(2) Presence of a boat shaped sternum on the 9th abdominal segment
(3) Forewings with darker tegmina
(4) Presence of caudal styles
Answer (4)
Sol. Males bear a pair of short, thread like anal styles which are absent in females.
Anal/caudal styles arise from 9th abdominal segment in male cockroach.
87. Which of the following organisms are known as chief producers in the oceans?
   (1) Euglenoids
   (2) Dinoflagellates
   (3) Cyanobacteria
   (4) Diatoms

**Answer (4)**

**Sol.** Diatoms are chief producers of the ocean.

88. Ciliates differ from all other protozoans in
   (1) having two types of nuclei
   (2) using flagella for locomotion
   (3) using pseudopodia for capturing prey
   (4) having a contractile vacuole for removing excess water

**Answer (1)**

**Sol.** Ciliates differ from other protozoans in having two types of nuclei.

   *eg. Paramoecium* have two types of nuclei i.e. macronucleus & micronucleus.

89. Which of the following animals does not undergo metamorphosis?
   (1) Starfish
   (2) Earthworm
   (3) Moth
   (4) Tunicate

**Answer (2)**

**Sol.** Metamorphosis refers to transformation of larva into adult.

Animal that perform metamorphosis are said to have indirect development.

In earthworm development is direct which means no larval stage and hence no metamorphosis.

90. Identify the vertebrate group of animals characterized by crop and gizzard in its digestive system
   (1) Osteichthyes
   (2) Amphibia
   (3) Aves
   (4) Reptilia

**Answer (3)**

**Sol.** The digestive tract of Aves has additional chambers in their digestive system as crop and gizzard.

Crop is concerned with storage of food grains.

Gizzard is a masticatory organ in birds used to crush food grain.

91. The two functional groups characteristic of sugars are
   (1) Carbonyl and hydroxyl
   (2) Hydroxyl and methyl
   (3) Carbonyl and phosphate
   (4) Carbonyl and methyl

**Answer (1)**

**Sol.** Sugar is a common term used to denote carbohydrate.

Carbohydrates are polyhydroxy aldehyde, ketone or their derivatives, which means they have carbonyl and hydroxyl groups.

92. Which among the following is not a prokaryote?
   (1) Oscillatoria
   (2) Saccharomyces
   (3) Nostoc
   (4) Mycobacterium

**Answer (2)**

**Sol.** Saccharomyces i.e. yeast is an eukaryote (unicellular fungi).

*Mycobacterium* – a bacterium

Oscillatoria and Nostoc are cyanobacteria.

93. Which of the following is not a product of light reaction of photosynthesis?
   (1) Oxygen
   (2) ATP
   (3) NADPH
   (4) NADH

**Answer (4)**

**Sol.** ATP, NADPH and oxygen are products of light reaction, while NADH is a product of respiration process.

94. Stomatal movement is not affected by
   (1) CO₂ concentration
   (2) Temperature
   (3) O₂ concentration
   (4) Light

**Answer (3)**

**Sol.** Light, temperature and concentration of CO₂ affect opening and closing of stomata while they are not affected by O₂ concentration.

95. The Golgi complex participates in
   (1) Activation of amino acid
   (2) Fatty acid breakdown
   (3) Respiration in bacteria
   (4) Formation of secretory vesicles

**Answer (4)**

**Sol.** Golgi complex, after processing releases secretory vesicles from their trans-face.
96. Which of the following is true for nucleolus?
   (1) It is a site for active ribosomal RNA synthesis
   (2) Larger nucleoli are present in dividing cells
   (3) It takes part in spindle formation
   (4) It is a membrane-bound structure

   **Answer (1)**
   **Sol.** Nucleolus is a non membranous structure and is a site of r-RNA synthesis.

97. The stage during which separation of the paired homologous chromosomes begins is
   (1) Zygotene
   (2) Pachytene
   (3) Diakinesis
   (4) Diplotene

   **Answer (4)**
   **Sol.** Synaptonemal complex disintegrates. Terminalisation begins at diplotene stage i.e. chiasmata start to shift towards end.

98. Stomata in grass leaf are
   (1) Barrel shaped
   (2) Dumb-bell shaped
   (3) Rectangular
   (4) Kidney shaped

   **Answer (2)**
   **Sol.** Grass being a monocot, has Dumb-bell shaped stomata in their leaves.

99. Pollen grains can be stored for several years in liquid nitrogen having a temperature of
   (1) –160°C
   (2) –120°C
   (3) –196°C
   (4) –80°C

   **Answer (3)**
   **Sol.** Pollen grains can be stored for several years in liquid nitrogen at –196°C (Cryopreservation)

100. Oxygen is not produced during photosynthesis by
   (1) *Chara*
   (2) Green sulphur bacteria
   (3) *Cycas*
   (4) *Nostoc*

   **Answer (2)**
   **Sol.** Green sulphur bacteria do not use H₂O as source of proton, therefore they do not evolve O₂.

101. Double fertilization is
   (1) Syngamy and triple fusion
   (2) Fusion of two male gametes of a pollen tube with two different eggs
   (3) Fusion of two male gametes with one egg
   (4) Fusion of one male gamete with two polar nuclei

   **Answer (1)**
   **Sol.** Double fertilization is a unique phenomenon that occur in angiosperms only.
   Syngamy + Triple fusion = Double fertilization

102. Which one of the following plants shows a very close relationship with a species of moth, where none of the two can complete its life cycle without the other?
   (1) *Viola* (2) *Hydrilla* (3) Banana (4) *Yucca*

   **Answer (4)**
   **Sol.** *Yucca* have an obligate mutualism with a species of moth *Pronuba*.

103. Which of the following elements is responsible for maintaining turgor in cells?
   (1) Calcium (2) Magnesium (3) Potassium (4) Sodium

   **Answer (3)**
   **Sol.** Potassium helps in maintaining turgidity of cells.

104. In which of the following forms is iron absorbed by plants?
   (1) Both ferric and ferrous (2) Ferric (3) Free element (4) Ferrous

   **Answer (2*)**
   **Sol.** Iron is absorbed by plants in the form of ferric ions. (According to NCERT)
   *Plants absorb iron in both form i.e. Fe²⁺ and Fe³⁺. (Preferably Fe²⁺)*

105. What is the role of NAD⁺ in cellular respiration?
   (1) It is the final electron acceptor for anaerobic respiration.
   (2) It functions as an enzyme.
   (3) It is a nucleotide source for ATP synthesis.
   (4) It functions as an electron carrier.

   **Answer (4)**
Sol. In cellular respiration, NAD+ act as an electron carrier.

106. Select the correct match
(1) Francois Jacob and Jacques Monod
(2) Alec Jeffreys - *Streptococcus pneumoniae*
(3) Matthew Meselson and F. Stahl
(4) Alfred Hershey and Martha Chase

Answer (1)
Sol. Francois Jacob and Jacque Monod proposed model of gene regulation known as operon model/lac operon.
- Alec Jeffreys - DNA fingerprinting technique.
- Alfred Hershey and Martha Chase – Proved DNA as genetic material not protein

107. The experimental proof for semi-conservative replication of DNA was first shown in a
(1) Virus
(2) Fungus
(3) Plant
(4) Bacterium

Answer (4)
Sol. Semi-conservative DNA replication was first shown in Bacterium *Escherichia coli* by Matthew Meselson and Franklin Stahl.

108. Select the correct statement
(1) Transduction was discovered by S. Altman
(2) Franklin Stahl coined the term “linkage”
(3) Spliceosomes take part in translation
(4) Punnett square was developed by a British scientist

Answer (4)
Sol. Punnett square was developed by a British geneticist, Reginald C. Punnett.
- Franklin Stahl proved semi-conservative mode of replication.
- Transduction was discovered by Zinder and Laderberg.
- Spliceosome formation is part of post-transcriptional change in Eukaryotes

109. Which of the following pairs is wrongly matched?
(1) T.H. Morgan : Linkage
(2) Starch synthesis in pea : Multiple alleles
(3) XO type sex : Grasshopper determination
(4) ABO blood grouping : Co-dominance

Answer (2)
Sol. Starch synthesis in pea is controlled by pleiotropic gene.
Other options (1, 3 & 4) are correctly matched.

110. Offsets are produced by
(1) Parthenogenesis
(2) Meiotic divisions
(3) Parthenocarpy
(4) Mitotic divisions

Answer (4)
Sol. Offset is a vegetative part of a plant, formed by mitosis.
- Meiotic divisions do not occur in somatic cells.
- Parthenogenesis is the formation of embryo from ovum or egg without fertilisation.
- Parthenocarpy is the fruit formed without fertilisation, (generally seedless)

111. Which of the following flowers only once in its life-time?
(1) Papaya
(2) Bamboo species
(3) Mango
(4) Jackfruit

Answer (2)
Sol. Bamboo species are monocarpic i.e., flower generally only once in its life-time after 50-100 years.
Jackfruit, papaya and mango are polycarpic i.e., produce flowers and fruits many times in their life-time.
112. Which of the following has proved helpful in preserving pollen as fossils?
(1) Sporopollenin
(2) Pollenkitt
(3) Oil content
(4) Cellulosic intine
Answer (1)
Sol. Sporopollenin cannot be degraded by enzyme; strong acids and alkali, therefore it is helpful in preserving pollen as fossil.

Pollenkitt – Help in insect pollination.
Cellulosic Intine – Inner sporoderm layer of pollen grain known as intine made up cellulose & pectin.
Oil content – No role is pollen preservation.

113. Use of bioresources by multinational companies and organisations without authorisation from the concerned country and its people is called
(1) Bioexploitation
(2) Bio-infringement
(3) Biodegradation
(4) Biopiracy
Answer (4)
Sol. Biopiracy is term used for or refer to the use of bioresources by multinational companies and other organisation without proper authorisation from the countries and people concerned with compensatory payment (definition of biopiracy given in NCERT).

114. Which of the following is commonly used as a vector for introducing a DNA fragment in human lymphocytes?
(1) pBR 322
(2) Retrovirus
(3) \( \lambda \) \ phage
(4) Ti plasmid
Answer (2)
Sol. Retrovirus is commonly used as vector for introducing a DNA fragment in human lymphocyte.

Gene therapy : Lymphocyte from blood of patient are grown in culture outside the body, a functional gene is introduced by using a retroviral vector, into these lymphocyte.

115. The correct order of steps in Polymerase Chain Reaction (PCR) is
(1) Denaturation, Annealing, Extension
(2) Extension, Denaturation, Annealing
(3) Denaturation, Extension, Annealing
(4) Annealing, Extension, Denaturation
Answer (1)
Sol. This technique is used for making multiple copies of gene (or DNA) of interest in vitro. Each cycle has three steps
(i) Denaturation
(ii) Primer annealing
(iii) Extension of primer

116. A ‘new’ variety of rice was patented by a foreign company, though such varieties have been present in India for a long time. This is related to
(1) Basmati
(2) Co-667
(3) Lerma Rojo
(4) Sharbati Sonora
Answer (1)
Sol. In 1997, an American company got patent rights on Basmati rice through the US patent and trademark office that was actually been derived from Indian farmer’s varieties.

The diversity of rice in India is one of the richest in the world, 27 documented varieties of Basmati are grown in India.

Indian basmati was crossed with semi-dwarf varieties and claimed as an invention or a novelty.

Sharbati Sonora and Lerma Rojo are varieties of wheat.

117. Select the correct match
(1) G. Mendel - Transformation
(2) Ribozyme - Nucleic acid
(3) T.H. Morgan - Transduction
(4) \( F_2 \times \) Recessive parent - Dihybrid cross
Answer (2)
Sol. Ribozyme is a catalytic RNA, which is nucleic acid.
118. In India, the organisation responsible for assessing the safety of introducing genetically modified organisms for public use is
(1) Genetic Engineering Appraisal Committee (GEAC)
(2) Indian Council of Medical Research (ICMR)
(3) Research Committee on Genetic Manipulation (RCGM)
(4) Council for Scientific and Industrial Research (CSIR)
Answer (1)
Sol. Indian Government has setup organisation such as GEAC (Genetic Engineering Appraisal Committee) which will make decisions regarding the validity of GM research and safety of introducing GM-organism for public services. (Direct from NCERT).

119. Which of the following is a secondary pollutant?
(1) O₃
(2) CO
(3) SO₂
(4) CO₂
Answer (1)
Sol. O₃ (ozone) is a secondary pollutant. These are formed by the reaction of primary pollutant.
CO – Quantitative pollutant
CO₂ – Primary pollutant
SO₂ – Primary pollutant

120. Natality refers to
(1) Number of individuals entering a habitat
(2) Death rate
(3) Number of individuals leaving the habitat
(4) Birth rate
Answer (4)
Sol. Natality refers to birth rate.
• Death rate – Mortality
• Number of individual entering a habitat – Immigration
• Number of individual leaving the habitat – Emigration

121. Niche is
(1) the functional role played by the organism where it lives
(2) all the biological factors in the organism's environment
(3) the range of temperature that the organism needs to live
(4) the physical space where an organism lives
Answer (1)
Sol. Ecological niche was termed by J. Grinnell. It refers the functional role played by the organism where it lives.

122. World Ozone Day is celebrated on
(1) 22nd April
(2) 5th June
(3) 16th September
(4) 21st April
Answer (3)
Sol. World Ozone day is celebrated on 16th September.
5th June - World Environment Day
21st April - National Yellow Bat Day
22nd April - National Earth Day

123. In stratosphere, which of the following elements acts as a catalyst in degradation of ozone and release of molecular oxygen?
(1) Oxygen
(2) Carbon
(3) Fe
(4) Cl
Answer (4)
Sol. UV rays act on CFCs, releasing Cl atoms, chlorine reacts with ozone in sequential method converting into oxygen. Carbon, oxygen and Fe are not related to ozone layer depletion.

124. What type of ecological pyramid would be obtained with the following data?
Secondary consumer : 120 g
Primary consumer : 60 g
Primary producer : 10 g
(1) Upright pyramid of biomass
(2) Inverted pyramid of biomass
(3) Upright pyramid of numbers
(4) Pyramid of energy
Answer (2)
Sol. • The given data depicts the inverted pyramid of biomass, usually found in aquatic ecosystem.
  • Pyramid of energy is always upright
  • Upright pyramid of biomass and numbers are not possible, as the data depicts primary producer is less than primary consumer and this is less than secondary consumers.

125. Pneumatophores occur in
   (1) Submerged hydrophytes
   (2) Halophytes
   (3) Carnivorous plants
   (4) Free-floating hydrophytes

Answer (2)
Sol. • Halophytes like mangroves have pneumatophores.
  • Apogeotropic (velly geotropic) roots having lenticels called pneumathodes to uptake \( \text{O}_2 \).

126. Sweet potato is a modified
   (1) Rhizome
   (2) Stem
   (3) Tap root
   (4) Adventitious root

Answer (4)
Sol. Sweet potato is a modified adventitious root for storage of food
  • Rhizomes are underground modified stem
  • Tap root is primary root directly elongated from the redicle

127. Secondary xylem and phloem in dicot stem are produced by
   (1) Axillary meristems
   (2) Apical meristems
   (3) Phellogen
   (4) Vascular cambium

Answer (4)
Sol. • Vascular cambium is partially secondary
  • Form secondary xylem towards its inside and secondary phloem towards outsides.
  • 4 – 10 times more secondary xylem is produced than secondary phloem.

128. Which of the following statements is correct?
   (1) Stems are usually unbranched in both Cycas and Cedrus
   (2) Ovules are not enclosed by ovary wall in gymnosperms
   (3) Horsetails are gymnosperms
   (4) Selaginella is heterosporous, while Salvinia is homosporous

Answer (2)
Sol. • Gymnosperms have naked ovule.
  • Called phanerogams without womb/ovary

129. Casparian strips occur in
   (1) Endodermis
   (2) Epidermis
   (3) Cortex
   (4) Pericycle

Answer (1)
Sol. • Endodermis have casparian strip on radial and inner tangential wall.
  • It is suberin rich.

130. Select the wrong statement :
   (1) Mitochondria are the powerhouse of the cell in all kingdoms except Monera
   (2) Cell wall is present in members of Fungi and Plantae
   (3) Pseudopodia are locomotory and feeding structures in Sporozoans
   (4) Mushrooms belong to Basidiomycetes

Answer (3)
Sol. Pseudopodia are locomotory structures in sarcodines (Amoeboid)

131. Plants having little or no secondary growth are
   (1) Cycads
   (2) Grasses
   (3) Conifers
   (4) Deciduous angiosperms

Answer (2)
Grasses are monocots and monocots usually do not have secondary growth.

Palm like monocots have anomalous secondary growth.

132. Match the items given in Column I with those in Column II and select the correct option given below:

<table>
<thead>
<tr>
<th>Column I</th>
<th>Column II</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Herbarium</td>
<td>(i) It is a place having a collection of preserved plants and animals</td>
</tr>
<tr>
<td>b. Key</td>
<td>(ii) A list that enumerates methodically all the species found in an area with brief description aiding identification</td>
</tr>
<tr>
<td>c. Museum</td>
<td>(iii) Is a place where dried and pressed plant specimens mounted on sheets are kept</td>
</tr>
<tr>
<td>d. Catalogue</td>
<td>(iv) A booklet containing a list of characters and their alternates which are helpful in identification of various taxa</td>
</tr>
</tbody>
</table>

Answer (1)

Sol.  
- Herbarium – Dried and pressed plant specimen
- Key – Identification of various taxa
- Museum – Plant and animal specimen are preserved
- Catalogue – Alphabetical listing of species

133. After karyogamy followed by meiosis, spores are produced exogenously in

1. Saccharomyces
2. Neurospora
3. Agaricus
4. Alternaria

Answer (3)

Sol.  
- In Agaricus (a genus of basidiomycetes), basidiospores or meiospores are produced exogenously.
- Neurospora (a genus of ascomycetes) produces ascospores as meiospores but endogenously inside the ascus.
- Alternaria (a genus of deuteromycetes) does not produce sexual spores.
- Saccharomyces (Unicellular ascomycetes) produces ascospores, endogenously.

134. Which one is wrongly matched?

1. Unicellular organism – Chlorella
2. Uniflagellate gametes – Polysiphonia
3. Gemma cups – Marchantia
4. Biflagellate zoospores – Brown algae

Answer (2)

Sol.  
- Polysiphonia is a genus of red algae, where asexual spores and gametes are non-motile or non-flagellated.
- Other options (1, 3 & 4) are correctly matched

135. Winged pollen grains are present in

1. Pinus
2. Mustard
3. Mango
4. Cycas

Answer (1)

Sol.  
In Pinus, winged pollen grains are present. It is extended outer exine on two lateral sides to form the wings of pollen. It is the characteristic feature, only in Pinus.

Pollen grains of Mustard, Cycas & Mango are not winged shaped.
136. The fundamental frequency in an open organ pipe is equal to the third harmonic of a closed organ pipe. If the length of the closed organ pipe is 20 cm, the length of the open organ pipe is

(1) 16 cm (2) 13.2 cm (3) 12.5 cm (4) 8 cm

Answer (2)

Sol. For closed organ pipe, third harmonic

$$\frac{3v}{4}$$

For open organ pipe, fundamental frequency

$$\frac{v}{2l}$$

Given,

$$\frac{3v}{4} = \frac{v}{2l'}$$

$$l' = \frac{4l}{3 \times 2} = \frac{2l}{3}$$

$$\frac{2 \times 20}{3} = 13.33 \text{ cm}$$

137. At what temperature will the rms speed of oxygen molecules become just sufficient for escaping from the Earth’s atmosphere?

(Given :
Mass of oxygen molecule (m) = 2.76 × 10^{-26} kg
Boltzmann’s constant $k_B = 1.38 \times 10^{-23} \text{ JK}^{-1}$

(1) 1.254 × 10^4 K (2) 2.508 × 10^4 K
(3) 5.016 × 10^4 K (4) 8.360 × 10^4 K

Answer (4)

Sol. $V_{\text{escape}} = 11200 \text{ m/s}$

Say at temperature $T$ it attains $V_{\text{escape}}$

$$\sqrt{\frac{3k_B T}{m_{O_2}}} = 11200 \text{ m/s}$$

On solving,

$$T = 8.360 \times 10^4 \text{ K}$$

138. The efficiency of an ideal heat engine working between the freezing point and boiling point of water, is

(1) 12.5% (2) 26.8% (3) 6.25% (4) 20%

Answer (2)

Sol. Efficiency of ideal heat engine, \( \eta = \left(1 - \frac{T_2}{T_1}\right) \)

$T_2$ : Sink temperature

$T_1$ : Source temperature

\[ \%\eta = \left(1 - \frac{T_2}{T_1}\right) \times 100 \]

\[ = \left(1 - \frac{273}{373}\right) \times 100 \]

\[ = \left(1 - \frac{100}{373}\right) \times 100 = 26.8\% \]

139. The volume (V) of a monatomic gas varies with its temperature (T), as shown in the graph. The ratio of work done by the gas, to the heat absorbed by it, when it undergoes a change from state A to state B, is

(1) \( \frac{1}{2} \) (2) \( \frac{2}{5} \) (3) \( \frac{1}{3} \) (4) \( \frac{2}{3} \)

Answer (2)

Sol. Given process is isobaric

\[ dQ = n C_p \, dT \]

\[ dQ = n \left(\frac{5}{2} R\right) \, dT \]

\[ dW = P \, dV = n \, RdT \]

Required ratio \[ \frac{dW}{dQ} = \frac{nRdT}{\frac{5}{2} n \, RdT} = \frac{2}{5} \]

140. A metallic rod of mass per unit length 0.5 kg m^{-1} is lying horizontally on a smooth inclined plane which makes an angle of 30° with the horizontal. The rod is not allowed to slide down by flowing a current through it when a magnetic field of induction 0.25 T is acting on it in the vertical direction. The current flowing in the rod to keep it stationary is

(1) 11.32 A (2) 7.14 A (3) 14.76 A (4) 5.98 A

Answer (1)
Sol. For equilibrium,
\[ mg \sin 30^\circ = l/B \cos 30^\circ \]
\[ l = \frac{mg}{B} \tan 30^\circ \]
\[ = \frac{0.5 \times 9.8}{0.25 \times \sqrt{3}} = 11.32 \text{ A} \]

141. An inductor 20 mH, a capacitor 100 \( \mu \text{F} \) and a resistor 50 \( \Omega \) are connected in series across a source of emf, \( V = 10 \sin 314 \text{ t} \). The power loss in the circuit is
(1) 1.13 W
(2) 0.79 W
(3) 2.74 W
(4) 0.43 W
Answer (2)

Sol.
\[ P_{av} = \left( \frac{V_{RMS}}{Z} \right)^2 R \]
\[ Z = \sqrt{R^2 + \left( \frac{1}{\omega L} \right)^2} = 56 \Omega \]
\[ P_{av} = \left( \frac{10}{\sqrt{2} \times 56} \right)^2 \times 50 = 0.79 \text{ W} \]

142. A thin diamagnetic rod is placed vertically between the poles of an electromagnet. When the current in the electromagnet is switched on, then the diamagnetic rod is pushed up, out of the horizontal magnetic field. Hence the rod gains gravitational potential energy. The work required to do this comes from
(1) The induced electric field due to the changing magnetic field
(2) The current source
(3) The lattice structure of the material of the rod
(4) The magnetic field
Answer (2)

Sol.
Energy of current source will be converted into potential energy of the rod.

143. Current sensitivity of a moving coil galvanometer is 5 div/mA and its voltage sensitivity (angular deflection per unit voltage applied) is 20 div/V. The resistance of the galvanometer is
(1) 500 \( \Omega \)
(2) 40 \( \Omega \)
(3) 250 \( \Omega \)
(4) 25 \( \Omega \)
Answer (3)

Sol.
**Current sensitivity**
\[ I_s = \frac{NBA}{C} \]

**Voltage sensitivity**
\[ V_s = \frac{NBA}{CR_G} \]

So, resistance of galvanometer
\[ R_G = \frac{I_s}{V_s} = \frac{5 \times 1}{20 \times 10^{-3}} = \frac{5000}{20} = 250 \Omega \]

144. A moving block having mass \( m \), collides with another stationary block having mass 4\( m \). The lighter block comes to rest after collision. When the initial velocity of the lighter block is \( v \), then the value of coefficient of restitution (\( e \)) will be
(1) 0.4
(2) 0.5
(3) 0.8
(4) 0.25
Answer (4)

Sol.
According to law of conservation of linear momentum,
\[ mv + 4m \times 0 = 4mv' + 0 \]
\[ v = \frac{v}{4} \]
\[ e = \text{Relative velocity of separation} = \frac{v}{4} \]
\[ e = \text{Relative velocity of approach} = \frac{v}{v} \]
\[ e = \frac{1}{4} = 0.25 \]

145. A body initially at rest and sliding along a frictionless track from a height \( h \) (as shown in the figure) just completes a vertical circle of diameter \( AB = D \). The height \( h \) is equal to
(1) \( \frac{5D}{4} \)
(2) \( \frac{3D}{2} \)
(3) \( \frac{7D}{5} \)
(4) \( D \)
Answer (1)
27

NEET (UG) - 2018 (Code-XX) ALHCA

Sol.

As track is frictionless, so total mechanical energy will remain constant

\[ T . M . E_0 = T . M . E_F \]

\[ 0 + mgh = \frac{1}{2}mv_L^2 + 0 \]

\[ h = \frac{v_L^2}{2g} \]

For completing the vertical circle, \( v_L \geq \sqrt{5gR} \)

\[ h = \frac{5gR}{2g} = \frac{5R}{2} = \frac{5}{4}D \]

146. Which one of the following statements is incorrect?

(1) Coefficient of sliding friction has dimensions of length.
(2) Rolling friction is smaller than sliding friction.
(3) Frictional force opposes the relative motion.
(4) Limiting value of static friction is directly proportional to normal reaction.

Answer (1)

Sol. Coefficient of sliding friction has no dimension.

\[ f = \mu_s N \]

\[ \mu_s = \frac{f}{N} \]

147. Three objects, A : (a solid sphere), B : (a thin circular disk) and C : (a circular ring), each have the same mass M and radius R. They all spin with the same angular speed \( \omega \) about their own symmetry axes. The amounts of work (W) required to bring them to rest, would satisfy the relation

(1) \( W_A > W_C > W_B \)  
(2) \( W_C > W_B > W_A \)  
(3) \( W_B > W_A > W_C \)  
(4) \( W_A > W_B > W_C \)

Answer (2)

Sol. Work done required to bring them rest

\[ \Delta W = \Delta KE \]

\[ \Delta W = \frac{1}{2}l\omega^2 \]

\[ \Delta W \propto I \] for same \( I \)

\[ W_A : W_B : W_C = \frac{2}{5}MR^2 : \frac{1}{2}MR^2 : MR^2 \]

\[ = 2 : 1 : 1 \]

\[ = 4 : 5 : 10 \]

\[ \Rightarrow W_C > W_B > W_A \]

148. Unpolarised light is incident from air on a plane surface of a material of refractive index '\( \mu \)'. At a particular angle of incidence 'i', it is found that the reflected and refracted rays are perpendicular to each other. Which of the following options is correct for this situation?

(1) \( \mu = \tan^{-1} \left( \frac{1}{i} \right) \)
(2) Reflected light is polarised with its electric vector parallel to the plane of incidence
(3) \( \mu = \sin^{-1} \left( \frac{1}{i} \right) \)
(4) Reflected light is polarised with its electric vector perpendicular to the plane of incidence

Answer (4)

Sol. When reflected light rays and refracted rays are perpendicular, reflected light is polarised with electric field vector perpendicular to the plane of incidence.

Also, \( \tan i = \mu \) (Brewster angle)
149. In Young's double-slit experiment the separation $d$ between the slits is 2 mm, the wavelength $\lambda$ of the light used is 5896 Å and distance $D$ between the screen and slits is 100 cm. It is found that the angular width of the fringes is $0.20^\circ$. To increase the angular width to $0.21^\circ$ (with same $\lambda$ and $D$) the separation between the slits needs to be changed to

(1) 1.7 mm  
(2) 1.8 mm  
(3) 2.1 mm  
(4) 1.9 mm  

Answer (4)  

Sol. Angular width $\theta = \frac{\lambda}{d}$  

\[ 0.20^\circ = \frac{\lambda}{2 \text{ mm}} \quad \text{...(i)} \]  

\[ 0.21^\circ = \frac{\lambda}{d} \quad \text{...(ii)} \]  

Dividing we get,  

\[ \frac{0.20}{0.21} = \frac{d}{2 \text{ mm}} \]  

\[ \therefore \quad d = 1.9 \text{ mm} \]  

150. An astronomical refracting telescope will have large angular magnification and high angular resolution, when it has an objective lens of

(1) Small focal length and small diameter  
(2) Small focal length and large diameter  
(3) Large focal length and large diameter  
(4) Large focal length and small diameter  

Answer (3)  

Sol. For telescope, angular magnification $= \frac{f_o}{f_e}$  

So, focal length of objective lens should be large.  

Angular resolution $= \frac{D}{1.22\lambda}$ should be large.  

So, objective should have large focal length ($f_o$) and large diameter $D$.  

151. In the circuit shown in the figure, the input voltage $V_i$ is 20 V, $V_{BE} = 0$ and $V_{CE} = 0$. The values of $I_b$, $I_c$ and $\beta$ are given by

(1) $I_B = 40 \mu A$, $I_C = 5 \text{ mA}$, $\beta = 125$  
(2) $I_B = 40 \mu A$, $I_C = 10 \text{ mA}$, $\beta = 250$  
(3) $I_B = 20 \mu A$, $I_C = 5 \text{ mA}$, $\beta = 250$  
(4) $I_B = 25 \mu A$, $I_C = 5 \text{ mA}$, $\beta = 200$  

Answer (1)  

Sol. $V_{BE} = 0$  

$V_{CE} = 0$  

$V_B = 0$  

$V_i = V_{BE} + I_B R_B$  

$V_i = 0 + I_B R_B$  

$20 = I_B \times 500 \times 10^3$  

$I_B = \frac{20}{500 \times 10^3} = 40 \mu A$  

$I_C = \frac{(20 - 0)}{4 \times 10^3} = 5 \text{ mA}$  

$V_i = V_{BE} + I_B R_B$  

$V_i = 0 + I_B R_B$  

$20 = I_B \times 500 \times 10^3$  

$I_B = \frac{20}{500 \times 10^3} = 40 \mu A$  

$\beta = \frac{I_C}{I_B} = \frac{25 \times 10^{-3}}{40 \times 10^{-6}} = 125$
152. In a p-n junction diode, change in temperature due to heating
(1) Affects the overall V-I characteristics of p-n junction
(2) Affects only reverse resistance
(3) Does not affect resistance of p-n junction
(4) Affects only forward resistance
Answer (1)
Sol. Due to heating, number of electron-hole pairs will increase, so overall resistance of diode will change.
Due to which forward biasing and reversed biasing both are changed.

153. In the combination of the following gates the output Y can be written in terms of inputs A and B as

(1) \( A + B \)
(2) \( A \cdot B \)
(3) \( \overline{A \cdot B} + A \cdot \overline{B} \)
(4) \( A \cdot \overline{B} + \overline{A} \cdot B \)
Answer (4)
Sol. \( Y = (A \cdot \overline{B} + \overline{A} \cdot B) \)

154. A carbon resistor of \((47 \pm 4.7) \text{k}\Omega\) is to be marked with rings of different colours for its identification. The colour code sequence will be
(1) Green – Orange – Violet – Gold
(2) Violet – Yellow – Orange – Silver
(3) Yellow – Green – Violet – Gold
(4) Yellow – Violet – Orange – Silver
Answer (4)
Sol. \((47 \pm 4.7) \text{k}\Omega = 47 \times 10^3 \pm 10\%
\therefore \) Yellow – Violet – Orange – Silver

155. A set of ‘n’ equal resistors, of value ‘R’ each, are connected in series to a battery of emf ‘E’ and internal resistance ‘R’. The current drawn is I. Now, the ‘n’ resistors are connected in parallel to the same battery. Then the current drawn from battery becomes 10 I. The value of ‘n’ is
(1) 9
(2) 10
(3) 20
(4) 11
Answer (2)
Sol. \( I = \frac{E}{nR + R} \) \( \ldots (i) \)
\( 10I = \frac{E}{\frac{R}{n} + R} \) \( \ldots (ii) \)
Dividing (ii) by (i),
\[ 10 = \left(\frac{n+1}{n}\right) \left(\frac{1}{1+1}\right) \]
After solving the equation, \( n = 10 \)

156. A battery consists of a variable number ‘n’ of identical cells (having internal resistance ‘r’ each) which are connected in series. The terminals of the battery are short-circuited and the current I is measured. Which of the graphs shows the correct relationship between I and n?

Answer (2)
Sol. \( I = \frac{ne}{nr} = \frac{e}{r} \)
So, I is independent of n and I is constant.
157. Two wires are made of the same material and have the same volume. The first wire has cross-sectional area $A$ and the second wire has cross-sectional area $3A$. If the length of the first wire is increased by $\Delta l$ on applying a force $F$, how much force is needed to stretch the second wire by the same amount?

(1) $F$
(2) $9F$
(3) $4F$
(4) $6F$

Answer (2)

Sol. Wire 1:

$$\Delta l \equiv \frac{F}{AY} 3l$$  \hspace{1cm} \text{...(i)}

For wire 2,

$$\Delta l \equiv \frac{F'}{3AY} l$$  \hspace{1cm} \text{...(ii)}

From equation (i) & (ii),

$$\Delta l \equiv \frac{F}{AY} 3l = \frac{F'}{3AY} l$$

$$\Rightarrow \frac{F'}{F} = 9$$

158. A sample of 0.1 g of water at 100°C and normal pressure $(1.013 \times 10^5 \text{ Nm}^{-2})$ requires 54 cal of heat energy to convert to steam at 100°C. If the volume of the steam produced is 167.1 cc, the change in internal energy of the sample, is

(1) 84.5 J
(2) 104.3 J
(3) 42.2 J
(4) 208.7 J

Answer (4)

Sol. \[ \Delta Q = \Delta U + \Delta W \]
\[ \Rightarrow 54 \times 4.18 = \Delta U + 1.013 \times 10^5 (167.1 \times 10^{-6} - 0) \]
\[ \Rightarrow \Delta U = 208.7 \text{ J} \]

159. A small sphere of radius 'r' falls from rest in a viscous liquid. As a result, heat is produced due to viscous force. The rate of production of heat when the sphere attains its terminal velocity, is proportional to

(1) $r^1$
(2) $r^3$
(3) $r^5$
(4) $r^2$

Answer (3)

Sol. \[ \text{Power} = 6\pi r V_T \cdot V_T = 6\pi r V_T^2 \]
\[ V_T \propto r^2 \]
\[ \Rightarrow \text{Power} \propto r^5 \]

160. The power radiated by a black body is $P$ and it radiates maximum energy at wavelength, $\lambda_0$. If the temperature of the black body is now changed so that it radiates maximum energy at wavelength $\frac{3}{4} \lambda_0$, the power radiated by it becomes $nP$. The value of $n$ is

(1) $\frac{81}{256}$
(2) $\frac{3}{4}$
(3) $\frac{256}{81}$
(4) $\frac{4}{3}$

Answer (3)

Sol. We know,
\[ \lambda_{\text{max}} T = \text{constant} \text{ (Wien's law)} \]
\[ \text{So, } \lambda_{\text{max}_1} T_1 = \lambda_{\text{max}_2} T_2 \]
\[ \Rightarrow \lambda_0 T = \frac{3\lambda_0}{4} T' \]
\[ \Rightarrow T' = \frac{4}{3} T \]
\[ \text{So, } \frac{P^2}{P_1} = \left(\frac{T'}{T}\right)^4 = \left(\frac{4}{3}\right)^4 = \frac{256}{81} \]
161. An electron falls from rest through a vertical distance \( h \) in a uniform and vertically upward directed electric field \( E \). The direction of electric field is now reversed, keeping its magnitude the same. A proton is allowed to fall from rest in it through the same vertical distance \( h \). The time of fall of the electron, in comparison to the time of fall of the proton is

- (1) Equal
- (2) Smaller
- (3) 10 times greater
- (4) 5 times greater

Answer (2)

\[ t = \sqrt{\frac{2eh}{me}} \]

\[ t \propto \sqrt{m} \] as ‘e’ is same for electron and proton.

\[ \therefore \text{Electron has smaller mass so it will take smaller time.} \]

162. A pendulum is hung from the roof of a sufficiently high building and is moving freely to and fro like a simple harmonic oscillator. The acceleration of the bob of the pendulum is 20 m/s\(^2\) at a distance of 5 m from the mean position. The time period of oscillation is

- (1) 1 s
- (2) \( 2\pi \) s
- (3) 2 s
- (4) \( \pi \) s

Answer (4)

\[ |a| = \omega^2y \]

\[ 20 = \omega^2(5) \]

\[ \Rightarrow \omega = 2 \text{ rad/s} \]

\[ T = \frac{2\pi}{\omega} = \frac{2\pi}{2} = \pi \text{ s} \]

163. A tuning fork is used to produce resonance in a glass tube. The length of the air column in this tube can be adjusted by a variable piston. At room temperature of 27\(^\circ\)C two successive resonances are produced at 20 cm and 73 cm of column length. If the frequency of the tuning fork is 320 Hz, the velocity of sound in air at 27\(^\circ\)C is

- (1) 300 m/s
- (2) 330 m/s
- (3) 350 m/s
- (4) 339 m/s

Answer (4)

\[ v = 2 \left( \nu \right) \left[ L_2 - L_1 \right] \]

\[ = 2 \times 320 \left[ 73 - 20 \right] \times 10^{-2} \]

\[ = 339.2 \text{ ms}^{-1} \]

\[ = 339 \text{ m/s} \]

164. The electrostatic force between the metal plates of an isolated parallel plate capacitor \( C \) having a charge \( Q \) and area \( A \), is

- (1) Inversely proportional to the distance between the plates
- (2) Independent of the distance between the plates
- (3) Proportional to the square root of the distance between the plates
- (4) Linearly proportional to the distance between the plates

Answer (2)

\[ F_{\text{plate}} = \frac{Q^2}{2\epsilon_0 A} \]

F is independent of the distance between plates.

165. When the light of frequency \( 2\nu_0 \) (where \( \nu_0 \) is threshold frequency), is incident on a metal plate, the maximum velocity of electrons emitted is \( \nu_1 \). When the frequency of the incident radiation is increased to \( 5\nu_0 \), the maximum velocity of electrons emitted from the same plate is \( \nu_2 \). The ratio of \( \nu_1 \) to \( \nu_2 \) is

- (1) 2 : 1
- (2) 1 : 2
- (3) 4 : 1
- (4) 1 : 4

Answer (2)

\[ h(2\nu_0) = \nu_0 + \frac{1}{2} mv_1^2 \]

\[ \nu_0 = \frac{1}{2} mv_1^2 \] \( \cdots \) (i)

\[ h(5\nu_0) = \nu_0 + \frac{1}{2} mv_2^2 \]

\[ 4\nu_0 = \frac{1}{2} mv_2^2 \] \( \cdots \) (ii)

Divide (i) by (ii),

\[ \frac{1}{4} = \frac{v_1^2}{v_2^2} \]

\[ \frac{v_1}{v_2} = \frac{1}{2} \]

166. For a radioactive material, half-life is 10 minutes. If initially there are 600 number of nuclei, the time taken (in minutes) for the disintegration of 450 nuclei is

- (1) 15
- (2) 20
- (3) 30
- (4) 10

Answer (2)
167. The ratio of kinetic energy to the total energy of an electron in a Bohr orbit of the hydrogen atom, is

(1) 1 : –2
(2) 1 : 1
(3) 2 : –1
(4) 1 : –1

Answer (4)

Sol. KE = –(total energy)
So, Kinetic energy : total energy = 1 : –1

168. An electron of mass m with an initial velocity $V = V_0 \hat{i}$ ($V_0 > 0$) enters an electric field $E = -E_0 \hat{i}$ ($E_0 = \text{constant} > 0$) at $t = 0$. If $\lambda_0$ is its de-Broglie wavelength initially, then its de-Broglie wavelength at time $t$ is

(1) $\lambda_0$
(2) $\frac{\lambda_0}{1 + \frac{eE_0}{mV_0}t}$
(3) $\lambda_0 t$
(4) $\lambda_0 \left(1 + \frac{eE_0}{mV_0}t\right)$

Answer (2)

Sol. Initial de-Broglie wavelength
$$\lambda_0 = \frac{\hbar}{mV_0} \quad \ldots \text{(i)}$$

170. If the mass of the Sun were ten times smaller and the universal gravitational constant were ten times larger in magnitude, which of the following is not correct?

(1) 'g' on the Earth will not change
(2) Raindrops will fall faster
(3) Time period of a simple pendulum on the Earth would decrease
(4) Walking on the ground would become more difficult

Answer (1)
Sol. If Universal Gravitational constant becomes ten times, then \( G' = 10 \ G \)

So, acceleration due to gravity increases.

i.e. (1) is wrong option.

171. A solid sphere is rotating freely about its symmetry axis in free space. The radius of the sphere is increased keeping its mass same. Which of the following physical quantities would remain constant for the sphere?

(1) Angular momentum

(2) Angular velocity

(3) Rotational kinetic energy

(4) Moment of inertia

Answer (1)

Sol. \( \tau_{ex} = 0 \)

So, \( \frac{dL}{dt} = 0 \)

i.e. \( L = \text{constant} \)

So angular momentum remains constant.

172. The kinetic energies of a planet in an elliptical orbit about the Sun, at positions A, B and C are \( K_A \), \( K_B \) and \( K_C \), respectively. AC is the major axis and SB is perpendicular to AC at the position of the Sun S as shown in the figure. Then

(1) \( K_B > K_A > K_C \)

(2) \( K_A < K_B < K_C \)

(3) \( K_B < K_A < K_C \)

(4) \( K_A > K_B > K_C \)

Answer (4)

Sol. For retracing its path, light ray should be normally incident on silvered face.

Applying Snell’s law at M,

\[
\frac{\sin i}{\sin 30^\circ} = \frac{\sqrt{2}}{1}
\]

\Rightarrow \sin i = \sqrt{2} \times \frac{1}{2}

\sin i = \frac{1}{\sqrt{2}} \text{ i.e. } i = 45^\circ

173. The refractive index of the material of a prism is \( \sqrt{2} \) and the angle of the prism is \( 30^\circ \). One of the two refracting surfaces of the prism is made a mirror inwards, by silver coating. A beam of monochromatic light entering the prism from the other face will retrace its path (after reflection from the silvered surface) if its angle of incidence on the prism is

(1) Zero

(2) \( 60^\circ \)

(3) \( 30^\circ \)

(4) \( 45^\circ \)

Answer (4)

Sol. For retracing its path, light ray should be normally incident on silvered face.

\[
\mu = \sqrt{2}
\]

174. The magnetic potential energy stored in a certain inductor is \( 25 \text{ mJ} \), when the current in the inductor is \( 60 \text{ mA} \). This inductor is of inductance

(1) \( 13.89 \text{ H} \)

(2) \( 0.138 \text{ H} \)

(3) \( 1.389 \text{ H} \)

(4) \( 138.88 \text{ H} \)

Answer (1)

Sol. Energy stored in inductor

\[
U = \frac{1}{2}Li^2
\]
176. An em wave is propagating in a medium with a velocity \( \mathbf{V} = V \mathbf{i} \). The instantaneous oscillating electric field of this em wave is along +y axis. Then the direction of oscillating magnetic field of the em wave will be along
(1) –x direction  
(2) –z direction  
(3) –y direction  
(4) +z direction

**Answer (4)**

**Sol.** \( \mathbf{E} \times \mathbf{B} = \mathbf{V} \)

\( (\mathbf{E} \mathbf{j}) \times (\mathbf{B}) = \mathbf{V} \mathbf{i} \)

So, \( \mathbf{B} = B \mathbf{k} \)

Direction of propagation is along +z direction.

177. A block of mass \( m \) is placed on a smooth inclined wedge ABC of inclination \( \theta \) as shown in the figure. The wedge is given an acceleration ‘\( a \)’ towards the right. The relation between \( a \) and \( \theta \) for the block to remain stationary on the wedge is
(1) \( a = g \tan \theta \)  
(2) \( a = \frac{g}{\csc \theta} \)  
(3) \( a = g \cos \theta \)  
(4) \( a = \frac{g}{\sin \theta} \)

**Answer (1)**

**Sol.**

In non-inertial frame,

\( N \cos \theta = ma \) \( \ldots \)(i)
\( N \sin \theta = mg \) \( \ldots \)(ii)

\[ \tan \theta = \frac{a}{g} \]
\[ a = g \tan \theta \]
178. A student measured the diameter of a small steel ball using a screw gauge of least count 0.001 cm. The main scale reading is 5 mm and zero of circular scale division coincides with 25 divisions above the reference level. If screw gauge has a zero error of –0.004 cm, the correct diameter of the ball is

(1) 0.529 cm
(2) 0.521 cm
(3) 0.053 cm
(4) 0.525 cm

Answer (1)

Sol. Diameter of the ball
\[ \text{Diameter} = \text{MSR} + \text{CSR} \times \text{(Least count)} - \text{Zero error} \]
\[ = 0.5 \text{ cm} + 25 \times 0.001 - (-0.004) \]
\[ = 0.5 + 0.025 + 0.004 \]
\[ = 0.529 \text{ cm} \]

179. The moment of the force, \[ \vec{F} = 4\hat{i} + 5\hat{j} - 6\hat{k} \] at \((2, 0, -3)\), about the point \((2, -2, -2)\), is given by

(1) \(-7\hat{i} - 4\hat{j} - 8\hat{k}\)
(2) \(-8\hat{i} - 4\hat{j} - 7\hat{k}\)
(3) \(-7\hat{i} - 8\hat{j} - 4\hat{k}\)
(4) \(-4\hat{i} - \hat{j} - 8\hat{k}\)

Answer (1)

Sol. The moment of the force
\[ \vec{\tau} = (\vec{r} - \vec{r}_0) \times \vec{F} \] ...
\[ \vec{r} - \vec{r}_0 = (2\hat{i} + 0\hat{j} - 3\hat{k}) - (2\hat{i} - 2\hat{j} - 2\hat{k}) \]
\[ = 0\hat{i} + 2\hat{j} - \hat{k} \]
\[ \vec{\tau} = \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ 0 & 2 & -1 \\ 4 & 5 & -6 \end{vmatrix} = -7\hat{i} - 4\hat{j} - 8\hat{k} \]

180. A toy car with charge \(q\) moves on a frictionless horizontal plane surface under the influence of a uniform electric field \(\vec{E}\). Due to the force \(q \vec{E}\), its velocity increases from 0 to 6 m/s in one second duration. At that instant the direction of the field is reversed. The car continues to move for two more seconds under the influence of this field. The average velocity and the average speed of the toy car between 0 to 3 seconds are respectively

(1) 1.5 m/s, 3 m/s
(2) 2 m/s, 4 m/s
(3) 1 m/s, 3.5 m/s
(4) 1 m/s, 3 m/s

Answer (4)

Sol. \(t = 0\) \(v = 0\)
\(t = 1\) \(a\)
\(t = 2\) \(B\)
\(v = 0\)

Acceleration \(a = \frac{6 - 0}{1} = 6 \text{ m/s}^2\)

For \(t = 0\) to \(t = 1\) s,
\[ S_1 = \frac{1}{2} \times 6(1)^2 = 3 \text{ m} \] ...

For \(t = 1\) s to \(t = 2\) s,
\[ S_2 = 6.1 - \frac{1}{2} \times 6(1)^2 = 3 \text{ m} \] ...

For \(t = 2\) s to \(t = 3\) s,
\[ S_3 = 0 - \frac{1}{2} \times 6(1)^2 = -3 \text{ m} \] ...

Total displacement \(S = S_1 + S_2 + S_3 = 3 \text{ m}\)

Average velocity \(= \frac{3}{3} = 1 \text{ m/s}\)

Total distance travelled = 9 m

Average speed \(= \frac{9}{3} = 3 \text{ m/s}\)
